DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-3, and 6-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Jung et al. (2004/0081434).

Regarding claim 1, Jung discloses a video playback device (Figure 9) showing a storing step (optical disc), a file system information-accessing step (READER), calculating step (note position data in Figure 12, "200, 380"), a DBCS accessing step (DOWNLOAD FONT DATA buffer), and an updating step (RENDERER). It should be noted that the RENDERER calculates the SP (sub picture or OSD) display area based on the position data.

Regarding claim 2, see optical disc in Figure 9.

Regarding claim 3, the disc reader in Jung inherently includes the calculating step and the capturing step as claimed.

Regarding claim 6, the MPEG files in DVD discs inherently include MP3 files.

Regarding claim 7, in addition of rejection above, Jung further shows a storage medium (optical disc), an on-screen display (OSD) buffer memory (TEXT FILE), a

Application/Control Number: 10/710,799

Art Unit: 2622

memory (DOWNLOAD FONT DATA buffer), a processor (READER), and an on-screen display unit (RENDERER).

Regarding claim 8, see paragraph 0123.

Regarding claim 9, see paragraph 0138. A different position of the subtitle is the same as the offset character as claimed.

Regarding claim 10, see Figure 9.

Regarding claim 11, the disc reader (Figure 9) and the disc writer (Figure 23) inherently includes a detector module. The reader and writer are capable to read and write the disc randomly, respectively.

Regarding claim 12, see rejection to claim 6.

Allowable Subject Matter

3. Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Chung et al. (2003/0086690) show a DBCS memory.

Ernst (5,005,137) shows two-byte character optimizer.

Takeuchi (6,879,775) shows an OSD device.

Tournier (6,630,966) shows an OSD RAM.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Lee whose telephone number 571-272-7349. The examiner can normally be reached on Monday through Thursday from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David L. Ometz, can be reached on 571-272-7593. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
